Optical Terminal Enclosure (OTE)

Product Description

The OTE (Optical Terminal Enclosure) is designed to support the splicing and termination of optical drops and traditional splicing in aerial, pole or wall mount applications. The unit is an in-line enclosure with 3 models to choose from depending on the drop cable being used. The OTE is constructed of a durable and impact resistant polyethylene material specifically formulated for outside plant environments. The unit can support express cabling as well as the addition of branch or lateral cabling. When used as a drop splicing or termination enclosure, the OTE will support a variety of drop designs and provide the environmental sealing and strain relief required.
